

DryJoistEZ[®]

Deck Drainage System

The DryJoistEZ[®] Deck Drainage System provides support for the deck surface boards of your choice and, most importantly, creates completely dry space below your deck.

The patented design of DryJoistEZ has the necessary utility of traditional deck joists, yet provides the freedom to build truly custom deck that is both waterproof and unmatched in fundamental strength.

DryJoistEZ is made from marine-grade aluminum, which means that it has excellent weathering characteristics and protects your deck structure components from the elements. DryJoistEZ is also fire-resistant, making it ideal for high-risk fire zones.

Add Additional Outdoor Living Space To Your Home

Environmentally Responsible: Made up of approximately 50% recycled aluminum, the DryJoistEZ® Deck Drainage System is a wood-free alternative to traditional deck joists or support beams.

Low Maintenance: DryJoistEZ is a trouble-free solution for creating a dry space beneath a deck and requires no structural upkeep.

Simple Installation: Installation requires standard deck building tools and can be performed by any building professional handyman.

Seamless System: DryJoistEZ components fit together in a way that creates a seamless, waterproof structure that supports the decking material of your choice.
